

Website Creation

Due: Friday, Nov. 11

For your project, you are required to have a publicly available website containing information about the project. Information about creating your own web page can be found at https://www.uml.edu/Sciences/computer-science/Faq/Unclassified.aspx#answer235061_0. A skeletal version of the website is due at the beginning of class on Wednesday, Nov. 11. Your team must submit a link on Blackboard by this time.

Your website must have certain pieces of information. Some of this must be completed by the due date while others will be placeholders or stubs that will be completed later in the semester.

You must include the following pieces of information.

- Brief project background
- Brief project description
- Team roster, with role names, photos, and links to individual web pages (LinkedIn or other professional pages are acceptable)

You must also include links to the following items.

- Original project description
- SRS (SW Requirements Spec)
- Prototype(s)
- Bibliography of resources used for domain research

Additionally, it should serve as a record of the group progress. This part should only be accessible to the group (and the Instructor). The following information must be available on either your group section of Blackboard or a secured portion of your web page.

- Agenda and minutes of all meetings (at least one per week)
- Milestones with internal and required deadlines
- Intermediate drafts of deliverables
